All nice to type fonts provide a structured glyph order for a better overview – just choose “CID / GID” instead of “Unicode” in your Glyphs overview.

✓ By CID/GID  
By Unicode

In addition preglyphs are featured in all nice to type OpenType fonts (.otf and .ttf) to structure our glyph set even more. To save webspace and loading time our webfonts (.WOFF/.WOFF) don't come with preglyphs.

A guitar amplifier (or amp) is an electronic device or system that strengthens the weak electrical signal from a pickup on an electric guitar, bass guitar, or acoustic guitar so that it can produce sound through one or more loudspeakers, which are typically housed in a wooden cabinet. A guitar amplifier may be a standalone wood or metal cabinet that contains only the power amplifier (and preamplifier) circuits, requiring the use of a separate speaker cabinet—or it may be a “combo” amplifier, which contains both the amplifier and one or more speakers in a wooden cabinet.
